Regardless of where your organization is on its journey to becoming a Lean-Agile enterprise, the solution you choose should enable a collaborative and coordinated approach to planning across all levels of the enterprise. Ideally, providing visibility into work-in-progress, cross-team dependencies, team performance metrics, and financials, as well as insight into multiple types of information (team, status, costs) for different stakeholders and their desired view.

Planview’s Lean and Agile Delivery solution empowers leaders to connect strategic objectives with Agile team delivery to continuously improve the flow of work, work smarter, and release high-value work faster. With collaborative, in-platform capacity and scenario planning capabilities, financial management, and team performance data, organizations can better assess the impact value delivered against dollars. Priorities can be shifted based on accurate data and feedback enabling the entire organization to easily pivot as needed to deliver desired business outcomes. And with the addition of automated Agile team costs, organizations can further show the impact their Agile teams are having on the bottom lines and profitability.

The Planview Lean and Agile Delivery solution enables teams and enterprises to:

- Fund and resource value streams based on strategic objectives
- Understand the true impact of Agile teams to the bottom line by identifying Agile development costs for proper CAPEX vs. OPEX categorization
- Use insights to foster feedback loops, drive improvements, and implement continuous planning to fuel innovation
- Measure the performance at every level of the value chain for transparency into progress and cost
- Transform and scale Agile on your terms and timeline
- Roll-up and connect the work of multiple teams, regardless of Agile work management tool or methodology
- Visualize and coordinate work with Enterprise Kanban for better insight into risks, dependencies, and delivery delays
Drive agility across the enterprise

Build alignment to strategic objectives with roadmapping and iterative funding of value streams. Create the opportunity for increased speed to market and innovative products and services.

- Translate your strategic objectives to a roadmap that connects the initiatives, funding, and target timeframes required for execution
- Set financial targets for portfolios, fund value streams, and adjust iteratively to facilitate decision-making at the value stream level and below
- Rank and analyze investments by business drivers and use what-if scenarios to compare options
- Fuel innovation and drive competitive advantage by gathering ideas, automating idea ranking, and aligning ideas with needs and capabilities

Fuel continuous improvement by analyzing performance, identifying trends, and evolving process. Evaluate performance metrics by portfolio, value stream, program, and team. Understand how work – planned and unplanned – is flowing through process and the impact it will have on achieving delivery dates, while continuously making improvements.

- Measure efficiency using Lean metrics such as flow, throughput, and lead time
- Define, evolve, and improve the process without restricting the way teams work
- Empower teams to adapt workflow processes for enhanced productivity

Optimize flow by visualizing value streams and reducing dependencies. Focus teams on the highest-priority work for the business and connect the work to strategic objectives. Product managers, program managers, development leaders, and their teams gain real-time visibility to the work, while maintaining insight to the delivery details.

- See the health of all work within and across teams
- Visually track progress and identify potential impediments – from a single team and board to hundreds of teams across multiple value streams
- Break down and distribute connected work across teams showing parent-child relationships and dependencies

Invest in value streams that align to strategic initiatives and flexibility to support decision-making

Measure speed of delivery, remove bottlenecks, and track flow throughput to identify opportunities for improvement

Visualize workflow to drive clarity, alignment, and focus on key objectives

Measure speed of delivery, remove bottlenecks, and track flow throughput to identify opportunities for improvement

Visualize workflow to drive clarity, alignment, and focus on key objectives
**Automate Agile team costs.** Eliminate timesheets and enable automated team costing for finance and Agile leaders to understand the true impact their Agile teams have to the bottom line.

- Eliminate the manual process of filling out time sheets, returning development time back to the business
- Roll-up and translate team assignments, work time, and work in progress to a consolidated view for finance
- Provide Finance with a fully auditable record of actual Agile costs

**Scale to the portfolio level for delivery of enterprise-level initiatives.** Increase strategic agility by coupling Lean principles and Agile delivery with Lean Portfolio Management.

- Dynamically forecast budget, assess current capacity, and optimize the strategic portfolio
- Maximize people with continuous investment and capacity planning support to achieve strategic outcomes

**Deliver larger, more complex outcomes by coordinating work streams across teams.** Realize value faster by breaking large-scale initiatives into iterative releases and understanding priorities.

- Scale Agile by synchronizing planning and coordinating work across Agile delivery teams
- Use multiple, interconnected Kanban boards that depict all features, enablers, milestones, and dependencies
- Support different scaling frameworks adopted by your organization, including SAFe®, DaD, LeSS, or a hybrid of practices

Get the right funding and budgeting with proper CAPEX reporting

Manage the complexity of Agile at scale by leveraging scenarios to create alternate release plans across Agile teams

Map dependencies and visualize features and epics involved to deliver large-scale initiatives effectively
Determine progress, make more informed decisions, and ensure results with integrated analytics and reporting. Powerful reports, dashboards, and analytics provide insights into delivery trends to remove bottlenecks, predict future issues, and proactively adapt to deliver highest-value work faster.

- Easily monitor team and enterprise roll-up statistics and drill down into potential issues
- Understand if planned work is tracking to completion goals and see the impact of unplanned work on defined milestones and deadlines
- Integrate the business intelligence tool of choice to meet your organization’s unique reporting needs

Leverage Lean and Agile principles to empower teams to innovate, adapt, execute, and deliver value faster. Stay ahead of the market with more productive, aligned teams.

- Focus Scrum teams, Kanban teams, and operations teams on the highest-priority work for the business
- Drive innovation and encourage experimentation by promoting collaboration and dynamic prioritization
- Reduce the complexity of delivery processes across multiple teams and tools and surface critical issues and opportunities for improvement.
- Illustrate the flow of information throughout the enterprise by enabling team member visibility

Planview’s Lean and Agile Delivery solution provides a scalable enterprise-level Lean Portfolio Management, value stream planning and Agile delivery platform that enables planning and value delivery from the strategic portfolio level to the Agile team. By allowing organizations to embrace disparate portfolio types and work methodologies, organizations can effectively evaluate how newer ways of working are contributing to the business and tune their plans to the highest value priorities. With transparency into how portfolio initiatives or value streams are progressing across the business and key insight into changes needed across financials, capacity and delivery, the entire organization can more fluidly shift to deliver better business outcomes.
