# Agile Coaches

## Promote successful Agile adoption. Deliver better results.

The quest to transform a business never stops. As an Agile Coach, you have to empower everyone, regardless of the role they play in an organization, to participate in meaningful ways and strive for continuous improvement. Through your servant leadership, you can promote a culture of change. But it takes more than a mindset shift to realize the full potential of Agile at scale.

To scale Agile beyond a siloed group of Agile teams means adding stability to teams, aligning them on a common planning and delivery cadence, and connecting their work for end-to-end visibility and insights. The software an organization selects to support Agile adoption and growth can either make or break your efforts. So, why not help the organizations you're working with choose software that can propel them to greatness?

### HOW PLANVIEW CAN HELP

#### Provide end-to-end visibility

Effectively align strategy to delivery and see the flow of value across teams, programs, and portfolios, in real time, with enterprise Kanban boards.

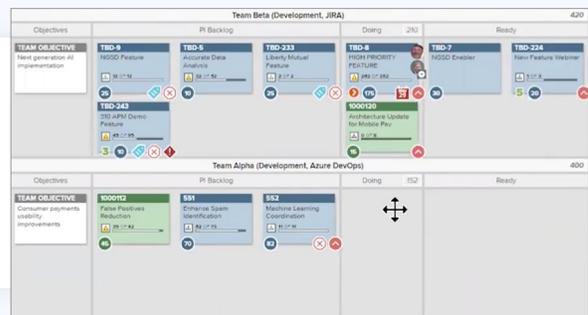

#### Model any workflow

Map out team and teams of teams process as it exists today or leverage best practices with pre-defined Kanban board templates. Easily adjust boards to represent process changes as your teams evolve their approach over time.

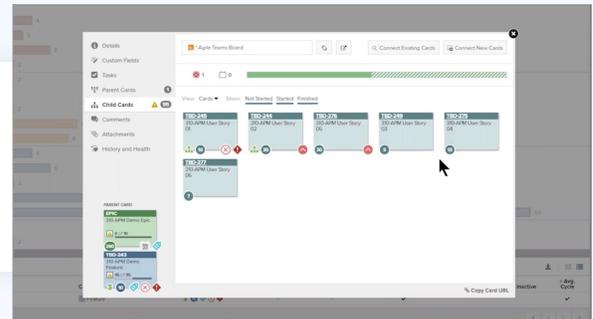

#### Connect teams

Connect teams working in a mix of Agile team tools – including Jira Software, Azure DevOps, Rally Software, Digital.ai, and more – leveraging an array of workflows and configurations with a single, highly configurable program or teams-of-teams board for cross-team collaboration.

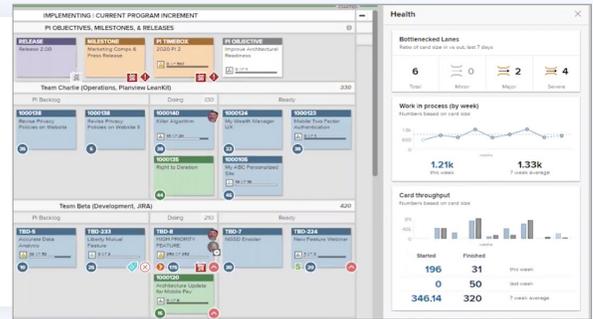

## Enable coordinated planning and delivery

Support teams in planning, prioritizing, and executing their work, while providing insights into work status and progress as well as dependencies, risks, and impediments that can impact delivery.

## Optimize flow and promote continuous improvement

Utilize board health metrics involving bottlenecks, WIP, and throughput to guide the optimization of workflows, improve velocity, and better prioritize efforts for more predictable delivery. Use Lean and Agile metrics to assess team performance and promote continuous improvement.

## Flexibly implement Agile frameworks

Support the constructs and practices associated with all Agile methodologies and Enterprise Agile Frameworks like SAFe®, LeSS, DA, Spotify, and others.

“People can finally see value in what we are asking them to do. When everybody is engaged, they don’t wonder why they’re doing something. They can see how their efforts roll up into achieving overall organizational goals.”

– Janette Brace, Agile Coach at Boeing Employees Credit Union

## Planview’s Agile Program Management Solution

Whether you want to coordinate and facilitate Program Increment (PI) or Quarterly planning, launch and manage teams of teams or Agile Release Trains, and/or connect and consolidate disparate Agile teams, Planview’s Agile Program Management solution brings everything together inside highly configurable program boards. Give your Agile teams a way to visualize, plan, coordinate, and deliver your organization’s biggest initiatives quickly, effectively, and with clear insight into the value delivered.
