Construction Project Management Made Simple

Few jobs are as demanding as construction project management. You have to keep track of deadlines, budget constraints, and contract requirements, as well as monitor materials on each project site. On top of that, the nature of your job means you must keep an ongoing channel of communication. This means staying in contact with a large number of clients and sub-contractors of different disciplines, to ensure everyone's on the same page as the projects progress. Keeping track of multiple construction projects at once can become chaotic without the help of a management solution, but with Projectplace for construction, you can coordinate with electricians, plumbers, and anyone else in the industry on one easy-to-use platform.

Planview Projectplace™ has been helping top construction companies around the world better manage budgets, deadlines, and quality since 1998. It comes loaded with a wide variety of tools to help with construction management so you can maximize productivity without sacrificing quality.

Stay connected from anywhere

Projectplace for construction makes it possible to access important project files like BIM and CAD models, drawings, technical specs, and more. But that's not all, you can even save the latest version of these documents and make them fully accessible to everyone involved in your project. And you can even review and approve drawings in real-time – all you need is an internet connection and a computer or portable device. All documents are stored in a centralized location, meaning all participating parties can pull the files up on an office computer or access them directly from the construction site using a smartphone or tablet. That way, you've always got the latest resources available to make informed decisions, regardless of where you are.

Keep the lines of communication open at all times

Projectplace helps internal and external parties stay in touch and up to date at all times. Use its built-in communication platform to coordinate, as well as share and view important data in real-time, so everyone stays up to speed on the direction of your construction projects.
Plan and manage projects more efficiently

Projectplace makes project management easier by removing chaos and uncertainty from your workflow. You can plan your workstream, breaking down tasks into a Gantt chart to visualize your project's stages and timeline. You can then connect the chart to a Kanban board to assign tasks to different team members, as well as sub-contractors across discipline. That way, you can visualize and monitor the progress of each construction project, watching tasks move down the workstream in real-time. This is helpful for identifying which tasks are currently being worked on, as well as locating any bottlenecks before they cause lengthy delays.
Save time and maximize profitability

Major construction projects can cost your company tens of thousands of dollars every hour. This means delays, mistakes, and other unnecessary setbacks can quickly eat into your company's profitability. Projectplace can help prevent these setbacks from happening by visualizing ongoing assignments and optimizing the workflow, organizing important information, and providing easy access so relevant team members can easily retrieve project information. That way, you have an easier time keeping all teams involved in contact with each other. This makes it easier to coordinate with your team, as well as external parties like designers, architects, and utility companies. That way, everyone has all the information and resources necessary to complete their tasks within the specified timeframe.

Safeguard your project data

It's common for big construction companies to have anywhere from 30-40 projects running at the same time. Losing information on one or more of those projects can be catastrophic and could set your company back millions of dollars. Projectplace's support and backup features are designed with this in mind, so you never lose critical information that could bring your projects to a grinding halt.
