

Planview Agile Scaler

Drive alignment, coordination, and delivery across teams and tools

Successful Agile teams produce positive results, but how do you ensure portfolio alignment and provide executive visibility to their work? How can you leverage their success and amplify it to accelerate delivery in support of larger programs and strategic initiatives? Scale Agile delivery across teams and connect to your portfolios with Planview Agile Scaler. The Scaler offering is designed to increase stakeholder visibility, manage dependencies across disparate Agile teams, automate information handoffs, drive continuous improvement, and promote collaboration and autonomy while aligning to the portfolio objectives that matter the most to the business.

Planview Agile Scaler gives teams the flexibility to continue to use the Agile execution tools they are familiar with, or that are already tailored to support their processes. Whether teams use Atlassian Jira, Rally Software by Broadcom, Microsoft Azure DevOps, CollabNet VersionOne, or Planview LeanKit™, Scaler gives Agile teams tool choice and flexibility – enabling them to deliver faster and more rapidly achieve the benefits of Agile at scale.

Planview Agile Scaler allows organizations to scale Agile success

- ✓ **Drive Portfolio Alignment and Stakeholder Collaboration:** Create visibility into the flow of work and collaborate across teams to ensure alignment with company initiatives. Drive investments in support of product, value stream, and portfolio priorities
- ✓ **Continuous Improvement:** Drive ongoing improvement with Lean metrics for measuring process efficiency, identifying areas of opportunity, and adapting workflow processes
- ✓ **Cross-team Dependency Management:** Synchronize planning and promote coordination across teams by breaking down epics and features, mapping out dependencies, and providing checkpoints for adjustment and priority realignment
- ✓ **Team Autonomy:** Give teams the ability to define their own processes and leverage existing Agile execution tools and work methodologies.

Planview Agile Scaler: How It Works

Planview Agile Scaler harmonizes status and assignments between portfolio management and Agile execution tools providing a flexible Agile connectivity integration layer for mapping Agile delivery into the portfolio. A model-based approach lets you map different teams and processes into a common view allowing teams to use their preferred tool and process. Teams, release train engineers, portfolio managers, and business leadership can visualize status, coordinate and manage dependencies, and gain a clear understanding of ownership, priorities, and shared objectives. With Planview Agile Scaler your organization can:

- ✓ **Drive alignment** by connecting strategic and portfolio direction with team delivery
- ✓ **Improve productivity** by removing bottlenecks and driving continuous improvement via lean metric and workflow analytics
- ✓ **Mitigate risks** by resolving problems sooner through visualization of work and dependencies across all delivery teams
- ✓ **Accelerate delivery** of new products and enhancements with shorter lead and cycle times with synchronized cross-team planning cadences

Depending on data synchronization needs, organizations can choose the level of information required. Choose between the ability to truly enable Agile at scale with dependency management, cross-team planning and insights, clear data parity and transparency, or use your integration to transport project time-tracking information to your portfolio. The level of alignment, synchronization, and functionality of your integration and between which solutions is up to you.

Planview Agile Scaler: Powered by Planview and Tasktop

Planview Agile Scaler utilizes a Tasktop integration for bi-directional synchronization between Planview Enterprise One, Planview LeanKit, and/or third-party Agile execution and task management tools. Tasktop's integration uses a unique model-based approach to consolidate and create centralized visibility on all planned and unplanned work across multiple tools for improved capacity, budget, prioritization, and understanding of velocity constraints and value delivery.
