Planview PSA: Enhancing Governance within a Growing IT Services Organization

INDUSTRY:
IT Services

GEOGRAPHIES:
Global

EMPLOYEES:
550

PLANVIEW PRODUCT:
 **Planview[®]**
ChangePoint

PLANVIEW SOLUTION:
Planview Professional Services Automation

CHALLENGE

Head of SMO for Bell Integrations, Shoib Kahn, understood that to outpace the abounding potential risks prevalent to a rapidly advancing IT services organization, the priority was to address their lack of visibility across the enterprise. Bell needed a solution to help connect information partitioned off within a labyrinth of contrasting data sources.

SOLUTION

Planview's Professional Services Automation solution gave Bell the tools they needed to connect and engage their workforce across the entire global enterprise, gain real-time visibility throughout the commercialization process, prioritize work, focus resources, and improve efficiency to deliver greater business impact in one highly adaptable, intuitive system.

"Even in the fairly small period of time we've been live, it's very clear that Planview PSA is delivering a lot of value. And we can see the value increasing."

– SHOIB KAHN,
HEAD OF SMO

ABOUT BELL INTEGRATION

From their UK headquarters, Bell Integration has been in the business of helping companies establish, maintain, and grow their IT services since 1996. With a client list that includes global charities, multi-national banks, and financial services companies, Bell Integration has grown to over 550 employees positioned around the world from London to Singapore.

CHALLENGE: DRAWING TOGETHER DATA FOR A MORE COMPREHENSIVE VIEW INTO PROJECT HEALTH

Governance can mean different things to different people, but to Shoib Kahn, Head of SMO (Service Management Office) at Bell Integration, it entails both addressing the current needs of the business while also anticipating how those needs will impact the future. "It's very easy to focus too much on how you're doing things now and where you're at now and not thinking about where you're going to be in 12, 18, 24 months," says Kahn.

Leading the SMO, Kahn and his team of 7 FTEs are responsible for providing several shared functions that support the SI (Systems Integrator) side of Bell's business, which accounts for 350 employees – more than 5x the total staff from when Kahn started in 2013. While assessing how Bell could effectively scale its governance and reporting capabilities to meet the demands of a booming IT services business, Kahn notes, "We're a growing business. Some of the things that we had in place had been working fine, but I think we could see that they were close to reaching their limits in terms of their ability to scale, their ability to deal with the volume of what was coming, and the increasing complexity of what was coming."

Bell required a tool that unlocked the value of the data held in its systems and provided a pro-active, comprehensive picture of project health. A solution that would also increase transparency to help head off potential risks and issues and, most importantly, scale to meet the increasing demands and complexity of a rapidly growing services business.

SOLUTION: AN EASIER WAY TO GET DATA IN AND BACK OUT AGAIN FOR A VARIETY OF AUDIENCES

Kahn began looking at what tools they might already have in place capable of meeting these updated requirements. Interest in Planview® PSA's enhanced features led to a series of demos and workshops where the team at Bell became convinced that Planview's capabilities went far beyond the time and expense functionality that they had initially implemented with Planview® ChangePoint in 2014.

Planview's Professional Services Automation solution could now power the entire services lifecycle from opportunity to billing, enabling Bell to build an authoritative system of record that centralizes and automates data and activities. Leadership would now be able to leverage Bell's analytics to create a single-source-of-truth supported by configurable dashboards and reports with relevant metrics and visualizations.

With the solution in place to improve decision-making with real-time transparency, internal discussions at SMO shifted to making sure timely, high-quality data was being fed into the system. Bell delivers a large spectrum of engagements and services from simple projects that last a couple of days to multiyear data center migrations with large project teams and multiple milestones. Kahn simplified this broad and disparate spectrum into a four-tier model with increasing granularity of the data required at each tier. Planview PSA made it easy for users at all tier levels to quickly access the necessary forms and enter data from RAID management details to contractual milestones.

Getting the data back out of the system was another area where Planview PSA improved the governance framework at Bell. "Once you get the data in, are you able to get that data back out again for a variety of audiences in the way that those various audiences want to consume it," Kahn questioned prior to implementation. With the enhanced functionality of Planview PSA, Bell was able to create customized dashboards with relevant metrics and visualizations with ease and then allow users to roll up or drill down into data as needed. "The ability of Planview's dashboards to pull data together in a sensible, logical way played a large part in determining the success of this project," says Kahn.

RESULTS: SINGLE SOURCE OF TRUTH MEANS NO MORE DISCONNECTED SPREADSHEETS, PROCESSES, AND SYSTEMS

While transitioning to new technology can present challenges – particularly when it seemingly disrupts practices that have been in place for years – removing longstanding bottlenecks to apply governance and increasing productivity can yield swift and profitable dividends. After just over six months of working with Planview PSA, Kahn remarked, "Even in the fairly small period of time we've been live, it's very clear that Planview PSA is delivering a lot of value. And we can see the value increasing."

And since much of what Planview PSA provides can be automated, "That frees up time for our PMO team to focus on revenue-generating tasks. That's where the real sweet spot is; where you get a lot of the benefit of the PMO and its activities," says Kahn. That increased efficiency has spread to other parts of the company where Finance is seeing value in using the solution to expedite the cycle from billable hours to paid invoices.

FUTURE: INTEGRATING RESOURCE MANAGEMENT CAPABILITIES TO IMPROVE OPERATIONAL RESPONSIVENESS

Bell Integration is at the forefront of helping companies improve their effectiveness and operational responsiveness. With that lens now pointed inward, the company looks to continue utilizing Planview PSA to drive continuous improvements. Kahn and his team are actively thinking about resource management as a next step.
