PLANVIEW®

Customer program

Planview CloudLift Program
Take your Planview implementation to the next level

The Planview CloudLift program is designed for customers who want to transition their on-premise installation to a hosted environment in the Planview Cloud. The program combines all the capabilities of your Planview solution with lower total cost of ownership (TCO) and higher quality of service while retaining your current commercial model for the software.

A dedicated team will manage all aspects of the technical transition including assessing your current on-premise deployment of Planview, defining a migration and data transfer plan, and delivering cloud access typically in 90 days or less. The team will also analyze existing integrations and ensure each is scoped and tested by the designated deployment time to ensure your system is running smoothly and securely. Once the migration is complete, you'll be free of the tasks and costs of operating, monitoring, and maintaining your installation and benefit from our optimized service delivery platform and technical expertise.

With hundreds of enterprise customers already leveraging the Planview Cloud, it transforms the way you deploy, manage, upgrade, and expand use of your Planview solution.
