Flexibility to Adapt in the Changing World of Work

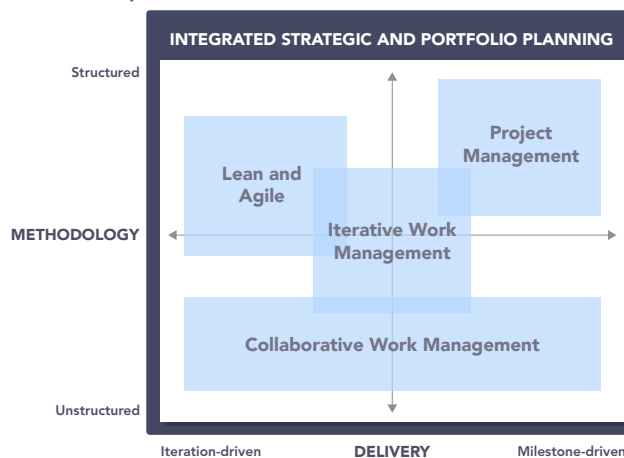

Planview FLEX

The need to drive innovation for products, services, and customer experiences is fundamentally challenging the traditional ways in which teams have worked. To improve responsiveness and speed delivery, many teams are now practicing lean and agile ways of working. Others have moved away from structured methodologies, instead using a collaborative approach to “get work done”. For some, traditional project methods continue to be best suited for their delivery requirements and team culture. Today’s enterprise is embracing a combination of these work approaches to increase the success rate of strategic delivery.

Every organization is seeking the right balance in ways of working, both for today and the future. To support a hybrid work environment, PMO and EPMO leaders, executives, and stakeholders need to find a way to give teams the right tools to deliver outcomes. With the pace of change, what these dynamic and evolving teams need today may not be what they need tomorrow, next quarter, or next year.

Planview Enterprise One™ and Planview PPM Pro™ customers have the ability to decide the right work experience and tool for the type of work being delivered. Organizations can leverage all capabilities of Lean-Agile and collaborative work, as well as traditional PPM capabilities, and can easily switch between experiences as teams and ways of work change. Ultimately, all work delivered is tied back into the integrated strategy and portfolio plans that provide stakeholder visibility, drive organizational alignment, and enable enterprise-wide transformation.

Adapt to the Changing World of Work

With Planview®, customers can take advantage of:

- ✔ **Hybrid Ways of Working** – Embrace different ways of working across the organization by empowering teams with purpose-built tools for each delivery approach – Lean-Agile, collaborative work, or traditional projects.
- ✔ **Flexibility as Teams Evolve** – As ways of working change in your organization, take advantage of the flexibility to switch between execution tools and delivery approaches that best suit the work.
- ✔ **Integrated Strategic and Portfolio Planning** – Ensure strategic alignment and balance capacity and demand across all work and delivery methods.
- ✔ **Performance Analytics and Reporting** – Measure progress and communicate status with program and portfolio-level dashboards and analytics that give stakeholders and executives clear understanding and actionable insights.

Flexibility to Choose the Best Tool and Approach for Work Delivery

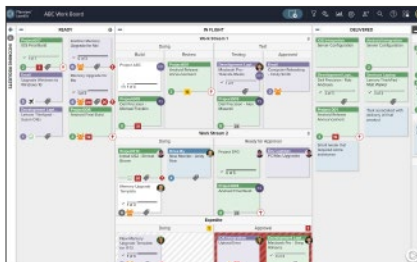

Organizations are no longer tied to a “one-size-fits-all” process or way of delivering work. Planview Enterprise One and Planview PPM Pro users can leverage different delivery experiences, adapting to the needs of the work while ensuring overall strategic alignment across all teams and methods used – whether teams are moving toward more agile ways of working, needing collaborative workspaces, or continuing with traditional PPM methods.

Lean-Agile Delivery

Teams can use lean and agile methods to accelerate delivery and innovation.

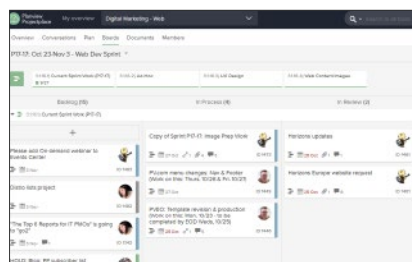

- Enterprise Kanban boards allow teams to visualize work, driving clarity, alignment, and focus on key objectives
- Dependency management gives teams the ability to coordinate work and pave the way for integrated delivery. Lean metrics provide the basis for continuous improvement
- Adaptive workflows offer teams the flexibility to use any process such as Scrum, Kanban, Scrumban, etc. to achieve continuous flow of value

Collaborative Work

Teams can use a collaborative experience to interactively track, manage, and deliver assigned tasks, unstructured work, and projects.

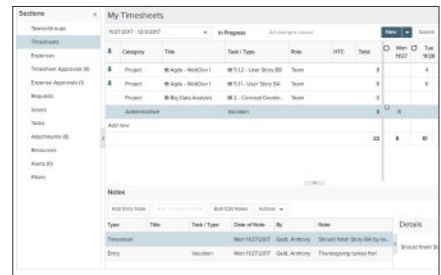

- Team members (co-located or dispersed) and project leads (whether formal or “accidental” project managers) can leverage project, roadmap, and team workspaces, giving users the ability get work done in an all-in-one collaboration tool
- Plan project work delivery, delegate tasks, collaborate on cards and documents, and track progress using integrated Kanban boards, Gantt charts, and other dynamic communication tools to increase project team efficiency

Traditional PPM

Some project teams and managers have known, clear-cut objectives and need to deliver work in a phased, prescriptive, and planned approach. Whether using waterfall, milestone-driven, or iterative methods and practices, a traditional PPM experience is a proven option.

- Give team members a focused way to understand assignments, log their actuals, and update status tied to projects and programs within a PPM-centric timesheet
- Actuals directly feed the project plan to highlight variances and draw the project manager’s attention to potential issues and trends before they impact delivery dates and costs for projects, programs, and the overall portfolio

Plan for the new ways of working. Learn how Planview can partner with your organization to connect strategy to delivery in the changing world of work.
