

INTRODUCTION

Integration is necessary... but how?

Seamless connections between your tools are essential in today's software development lifecycle. Without an integrated toolchain, your teams will be bogged down with manual work, consumed with duplicate data entry, and overrun with waste in their processes.

The real question isn't whether to integrate your toolchain; it's how quickly you can make it happen to achieve transformative efficiency. This infographic explains why the fastest way to achieve integration is by buying instead of building from scratch.

BUILD A SOLUTION

Opportunity Costs

TIME TO MARKET

Developing and launching a single point-to-point connector typically takes a year, and for more connectors or increased complexity, the timeline only extends further.

Planview has 60+ pre-built, no-code connectors across the most popular Agile, DevOps, and ITSM tools. Buying a solution will allow you to integrate quickly and start delivering better experiences in weeks.

DEVELOPMENT CAPACITY AND TIME

Developing in-house diverts precious time and ongoing resources from your development team, which should be dedicated to your core organizational mission and competencies.

At Planview, integration is our business. Our team of experts have performed rigorous technical analyses of endpoints, and deeply understand business requirements and use-cases, as well as APIs and testing. We constantly innovate to meet evolving customer demands and market needs.

QUALITY

Building effective, configurable integrations in complex environments requires sophisticated infrastructure and can compromise performance of other mission-critical applications.

Off-the-shelf solutions like Planview® Hub maintain the operational stability of your entire toolchain, all while providing real-time synchronization and built-in traceability.

Qualitative Costs

PERFORMANCE

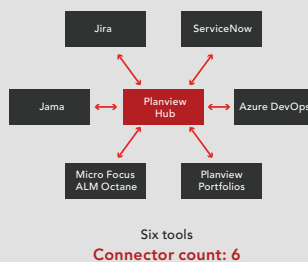

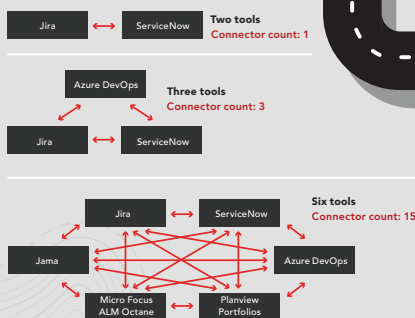

As apps update and evolve, their security requirements and APIs change as well. Will upgrades require lots of downtime and break integrations?

Planview Hub ensures a stable experience and interoperability between new and existing tools. It supports 300+ tool versions and runs 500,000+ tests daily to keep up to speed with tool upgrades while minimizing outages and delays.

SCALABILITY & MAINTENANCE

How will you deal with scalability as endpoints are added and updated with a point-to-point integration? Will it support new and evolving use-cases and customizations?

Planview Hub's world-class model-based integration requires 90% less maintenance than a point-to-point approach. It combats exponential growth of mappings as endpoints grow, making cross-tool reporting easy and flexible.

DEPLOYMENTS

Can it handle large deployments? Do you have the resources to provide dedicated support and expertise for testing and maintenance?

No coding is needed to configure Planview Hub. Our out-of-the-box Smart Mappings, intuitive web UI, and dedicated team get customers up and running quickly.

Planview Hub is the trusted value stream integration solution for over half of the Fortune 100 companies.

By entrusting connector development, maintenance, and upgrades to Planview, you'll unlock capacity to redirect your resources towards strategic work that will drive better business outcomes. Accelerate your time to market with a stable, interoperable, worry-free tool stack.
