

DATA SHEET

Integrate Your Software Supply Chain with Planview

Join 60+ Fortune 100 companies and the world's largest automotive companies

Digital products often depend on collaboration with third parties: partners, suppliers, vendors and customers. But cross-organizational collaboration can be slow, error-prone, and risky when it relies on offline communication, manual data duplication, and asynchronous handovers. In addition, visibility into the health of an overall product or project is poor and effortful.

Better Products, Faster Collaboration, and Improved Traceability

Planview® Hub is a purpose-built integration solution for the software delivery toolchain, designed for large scale organizations with thousands of technology staff, where work spans multiple tools, locations, suppliers and partners.

With Planview, each party can maintain their individual workflows while still working as a cohesive team. The necessary data is instantly available in each technologist's preferred tool, enabling efficient and streamlined operations. Planview supports over [60+ Agile and DevOps tools](#) including IBM, Atlassian, ServiceNow, Microsoft, Salesforce, Jama, BMC, and Codebeamer.

- ✓ Communicate requirements clearly
- ✓ Resolve defects faster
- ✓ Improve traceability
- ✓ Reduce escalations
- ✓ Reduce duplicate work

“All of development depends on a scalable, integrated, high performance toolchain. Planview is a central hub for a toolchain that allows us to create the most seamless integration possible, from code check-in to the build process to the test automation.

Rene Te-Strote, Senior IT Lead, BMW Group

Planview Hub Benefits

- Fast and error-free collaboration with near real-time, bi-directional data exchange
- Improved accuracy, traceability, and regulatory compliance across collaboration networks
- Deploy rapidly and start benefiting quickly thanks to 60+ plug-and-play tool connectors
- Eliminate overhead with robust API-based integrations that require no coding
- Keep your organization safe with built-in security through DMZ networks and SSL data encryption

FEATURES

- Intuitive and modern web UI for easy administration
- Easy to scale from a single project to thousands
- Easy to add new suppliers
- Easy to introduce new modern development tools
