

Planview® and SAFe®

The More You Know, the More You Flow

Are you maximizing your SAFe transformation efforts? How can you be sure?

The majority of Fortune 500 companies leverage the Scaled Agile Framework® (SAFe®) to enhance operational efficiency and agility, but adoption alone isn't enough. Without a clear understanding of their transformation, organizations risk falling behind more agile competitors and missing shifting customer expectations. To truly advance, they need more than just a framework – they need flexible solutions to connect, visualize, and measure their progress. For over 35 years, Planview has empowered enterprises with the cutting-edge software they need to innovate, thrive, and stay competitive in today's fast-paced market.

**Connect strategy to execution
across the entire delivery
lifecycle**

**Boost team productivity
and efficiency at the Team,
ART, and Portfolio levels**

**Accelerate flow to transform
and improve software
development**

Why SAFe Organizations Choose Planview

"The question was, how do we increase the speed of value delivery as efficiently and as cost-effectively as possible? To be efficient, we needed to know what steps in the process were slowing us down. Given the scope and scale of our SAFe implementation, it was very likely there wasn't just one answer to that question."

– Senior Consultant, Business Agility and SAFe

"We realized that if we didn't adopt the Flow Framework and measure the actual business value to the end customer instead of proxy metrics, we wouldn't know where to invest the money, where the bottlenecks were, and if we were being successful in transforming into a product-based organization,"

– Pieter Jordaan, Chief Technology Officer for TUI Group

How We Did It

✔ **Track outcomes against strategy**
Define cascading outcomes against OKRs to connect work to realized value.

✔ **Transparent roadmaps**
Visually align and communicate your product vision across the enterprise.

✔ **Fast flow of value**
See, manage, and measure software delivery from ideate to operate.

✔ **Centralized PI planning**
Achieve greater alignment across the enterprise through prioritization, smart tradeoffs, and progress tracking.

✔ **Fund value streams**
Define strategic objectives, fund initiatives, and track business impact from idea to delivery.

✔ **Connected software toolchain**
Break down data silos to automate and synchronize the flow of work across teams and tools.

Why Choose Planview?

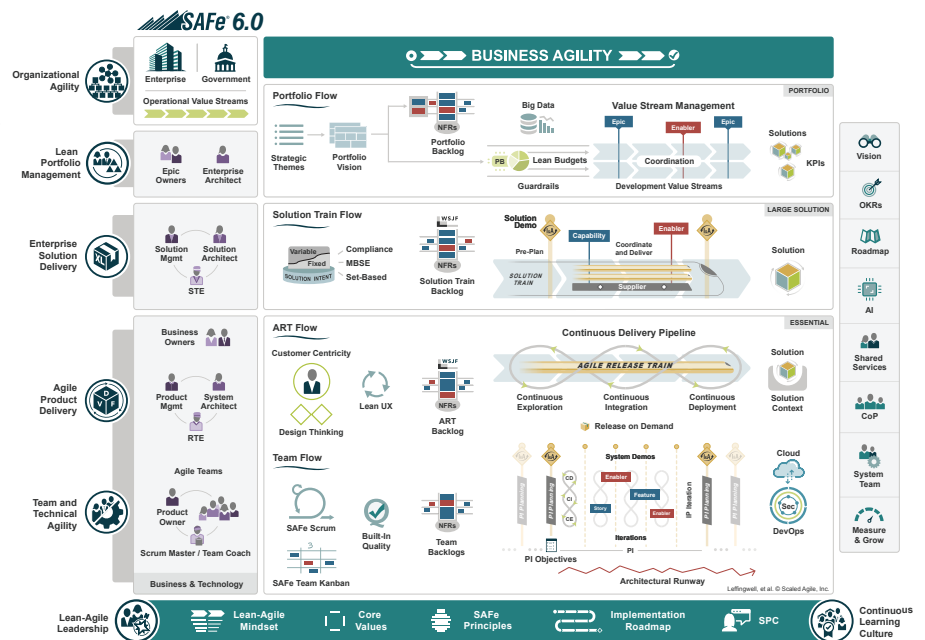

Planview equips organizations undergoing a SAFe transformation with comprehensive solutions to plan, connect, measure, and visualize value delivery. Supporting every aspect of the SAFe framework – from funding to feedback loops – Planview’s platform ensures seamless execution at every stage.

“Planview’s VSM solution provided insights into delays and other forms of waste in the development process by collecting data from the tools that teams use to develop software. Once we had the metrics and the insights, we used them to optimize flow.

If you’re improving Flow Velocity, or throughput, cost is constant, but you’re getting more done, so that equates to savings in capacity. We saw a big improvement in Flow Velocity – 29% over the course of four PIs, proving it was a sustained improvement.”

– Senior Consultant, Business Agility and SAFe

-  **Planview Portfolios** – Connect strategy to execution
-  **Planview Viz** – Seamlessly measure the flow of value
-  **Planview AgilePlace** – Visualize progress across all levels
-  **Planview Hub** – Synchronize your data for optimal efficiency
-  **Planview OKRs** – Evaluate and measure business
-  **Planview Roadmaps** – Clearly communicate product vision
-  **Planview Copilot** – Extract impactful insights from your data

Planview can help organizations using SAFe improve operational efficiency, reduce costs, mitigate risks, and drive growth and innovation in today’s dynamic environment.
