How Planview® Supports Business Agility with Scaled Agile Framework® (SAFe®)

Lean Portfolio Management: Combine a focus on outcomes and Lean approaches to demand management and governance with Planview Enterprise One™ portfolio management
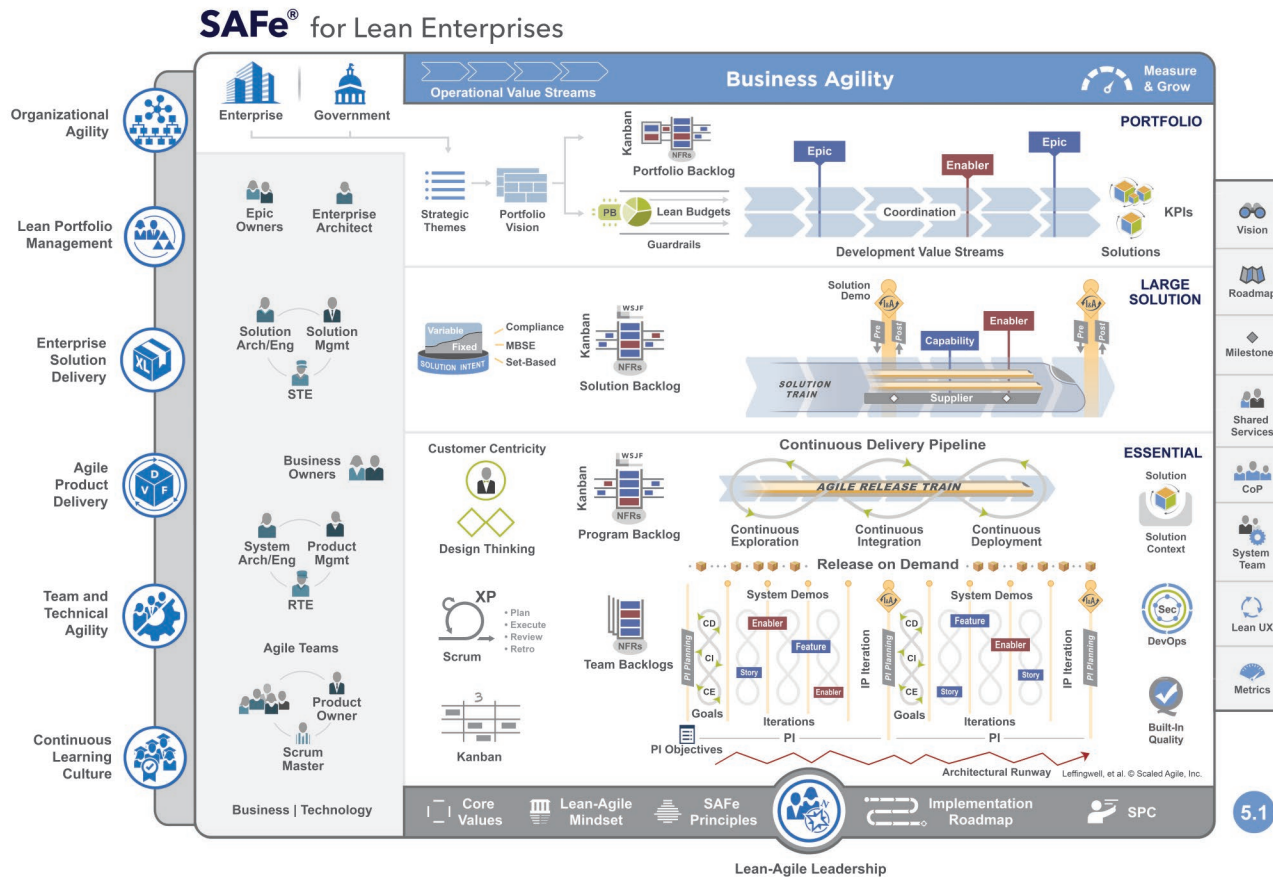

Capacity and Scenario Planning: Prepare for PI Planning by modeling value stream and release train capacity against prioritized epics and features with Planview Enterprise One capacity and scenario planning

Program and Team Visibility: Provide enterprise-wide visibility and measure progress by connecting delivery teams in various Agile tools to the program, solution, and portfolio levels

Value Stream Funding and Planning: Set direction, fund value streams, and define desired outcomes with Planview Enterprise One strategic and financial planning

Multi-level Planning and Delivery: Manage backlogs, set priorities and optimize the flow of epics, capabilities, features, and enablers with multi-tiered Planview LeanKit™ Enterprise Kanban boards

Program Increment Planning: Perform PI Planning by decomposing work and capturing dependencies on Planview LeanKit Kanban boards

SAFe® for Lean Enterprises
