

DATA SHEET

Planview Enterprise One

Accelerate strategic execution enterprise-wide across all work and resources

Savvy business leaders aspire to confidently drive change that advances their strategic objectives, but constrained resources and bottom-line pressures often cause mismatched plans and operations. The result is people not focused on the right work, money misspent, time wasted, and lost opportunities.

Creating the complex, interconnected products and services that move your business forward requires continually assessing and evolving your business capabilities while directing an unprecedented level of coordination between strategy, work, people, technology, and outcomes.

Planview Enterprise One™ is the first strategic execution solution that operationalizes your strategy enterprise-wide across all work, resources, and the products and services you must deliver.

Integrate Strategy, Planning, Execution, and Delivery with Planview Enterprise One

To help bring your strategy to life, fuel innovation, and drive digital transformation, Planview Enterprise One orchestrates all work and resources dynamically through integrated portfolios across projects, programs, people, products, technology, and capabilities, all within a common user experience. Enterprise One facilitates:

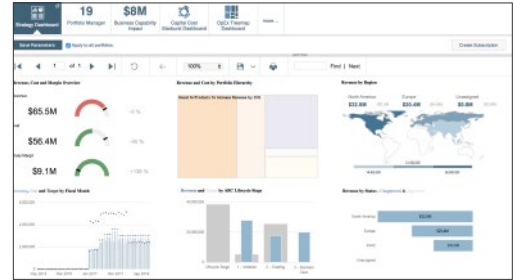

- **Strategy:** Translate strategy on an organization-wide, cross-functional scale with roadmaps and financials
- **Demand:** Collect and evaluate demand across the enterprise from unstructured ideas to formal requests, all in one place
- **Planning:** Plan portfolios, optimize resources – people, money, technology – and advance business capabilities to operationalize the strategic roadmap
- **Execution:** Manage and execute all types of work; efficiently and effectively leverage resources and technology
- **Outcomes:** Coordinate delivery and benefits realized from the products, services, and other outcomes that achieve strategic objectives
- **Team Collaboration:** Bring teams together to get things done, no matter where they work
- **Analytics and Reporting:** Make informed decisions every step of the way and provide C-level performance visibility and governance

1. Drive Your Strategic Plan

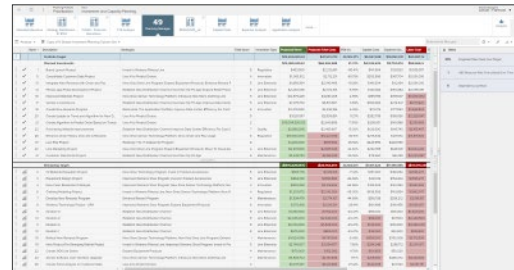

Translating strategy into delivery requires a strategic plan that you can manage across the organization.

With Planview Enterprise One, determine what business capabilities your goals require, assess their current state, determine gaps, and define investments. Build scenarios that optimize funding and resource allocation across potential investments and initiatives, and compare trade-offs to drive better decisions.

Set direction with integrated roadmaps to implement strategic, operational, and technology changes. Use programs to develop cross-functional plans, track status, and measure progress.

Gain a complete view of portfolio performance with strategic dashboards

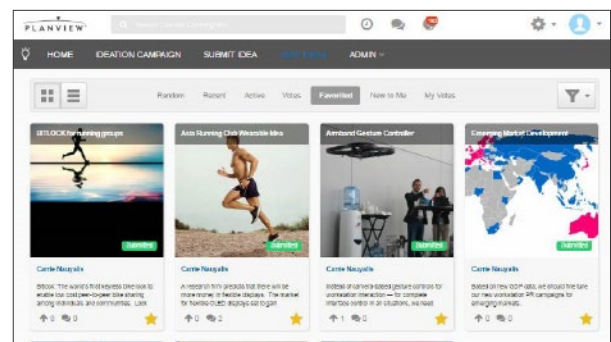

Analyze scenarios to compare trade-offs

2. Centralize Demand Intake

With Enterprise One, capture all types of demand – product ideas, project requests, emerging technology, and new features – and evaluate it against your strategic goals.

Engage a broader audience to identify creative ideas for new products and innovations with ideation.

Planview makes it easy to collect, evaluate, and prioritize suggestions and quickly test new product concepts before investing.

Collect, evaluate, and prioritize ideas to drive innovation

3. Plan Your Business, Project, and Technology Portfolios

Operationalize the strategic roadmap by optimizing portfolios and allocating resources to set the direction for execution. Identify the best approach given capacity constraints with impact analysis and scenario planning. Analyze impacts based on dependencies between business capabilities, applications, and technology. Build what-if scenarios to model the allocation of resources and funding.

Refine the plan based on change, be it top-down reprioritization or bottom-up work and resource actuals.

Plan and balance your capacity to focus the right resources on the right work

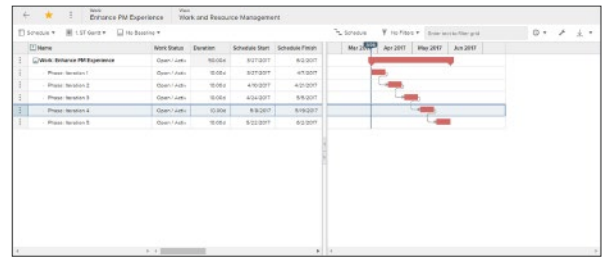

Visualize how your portfolios are connected integrating strategy, capability, applications, programs, and projects

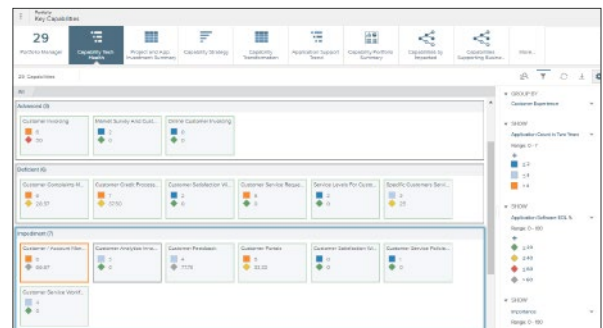

4. Execute the Plan

With plans in place, you need to drive progress for delivery, focusing people, money, and technology on the right priorities. Planview Enterprise One enables you to:

- Put the right resources on the right work at the right time: Balance, prioritize, and schedule resource capacity with a real-time view into both future demand and in-flight work.
- Execute any kind of work to deliver on time and on budget: Plan, manage, and deliver across all types of work, such as traditional, agile, iterative, and collaborative. Ensure on-time delivery with a comprehensive approach across scheduling, staffing, and tracking status
- Implement change across your application and technology portfolios: Rationalize your technology landscape to mature the business capabilities necessary to achieve your strategic objectives
- Improve governance: Enforce technology standards for more accurate project estimates and shortened project delivery times, while proactively avoiding technology debt caused by growing investment demands

Manage and execute on iteration-driven and hybrid project plans

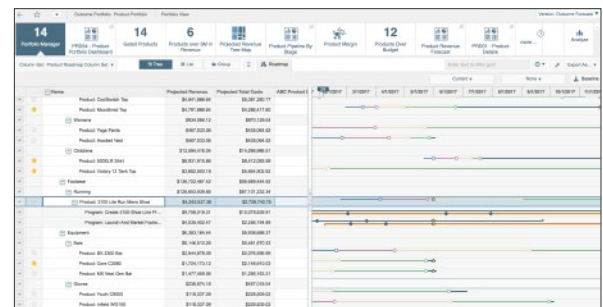

Analyze the complex relationships between your technology and business capabilities

5. Deliver Innovative Products, Services, and Outcomes

Going beyond work and projects, Enterprise One helps you coordinate delivery of all the outcomes – from products and services to internal applications and technologies to other entities such as stores and locations – required to achieve your strategic goals.

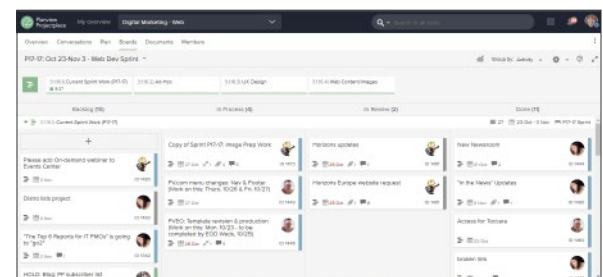

Manage the entire outcome lifecycle – launch, rollout, development, enhancement, or sunset. Analyze each outcome by technical viability, financial impact, resource capacity, complexity, risk, and commercialization success.

Outcome-driven roadmaps connect strategy with delivery of investments, products, technology, and applications

6. Facilitate Team Collaboration

Enterprise One brings teams together across geographical, cultural, and organizational boundaries to formulate plans and execute work. Collaborative workspaces and Kanban boards provide simple ways for all stakeholders and contributors to stay aligned, drive progress, and share key information.

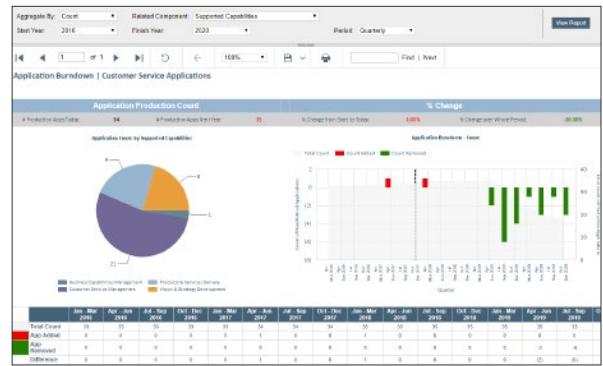

See the flow of work and progress across your team's collaborative projects and commitments

7. Improve Decision Making with Analytics and Reporting

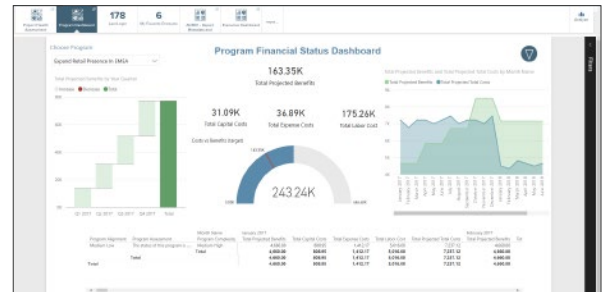

Make better decisions faster and achieve your goals with highly visual reports and powerful analytics to gain insights into demand, plans, work, resources, technology, and capabilities. Easily access, use, and share these via the intuitive user experience, which features executive dashboards and an innovative ribbon design with workflow-driven tiles.

Embedded directly into the user experience is interaction with Microsoft Power BI® for another level of data visualization, analysis, and transformation.

Planview's out-of-the box FastTrack reports enable immediate access to highly configurable, best practice reports and analytics that you need to run your business effectively starting on day one.

See application production and retirement date trends over time

Build and easily distribute compelling, strategic dashboard visualizations with Microsoft Power BI

Integrate Your Core Applications with Enterprise One

Seamlessly integrate applications your business relies on every day with Planview Enterprise One. Planview Integration-as-a-Service (IaaS) is a proven approach to speed delivery, cut costs, and de-risk implementation.

With a fixed price package that combines development, implementation, and support, Planview IaaS automates information flow between Planview solutions and any other application, be it cloud or on-premises, off-the-shelf, or homegrown.

Converging Portfolio and Resource Management, Capability and Technology Management, and Collaborative Work Management

Planview Enterprise One is the convergence of Planview Enterprise's Portfolio and Resource Management with Troux's Capability and Technology Management capabilities. By connecting strategic, business, and technology portfolios, the solution defines the roadmaps and programs needed to accelerate digital transformation and time-to-market for innovative products and services.

Planview Enterprise One also includes the Projectplace collaborative work management solution to bring teams together to get things done, no matter where they work.

Work and Resource Management with Planview Enterprise One

Planview Enterprise One powers Planview's work and resource management solutions for strategic planning, portfolio and resource management, Lean and Agile delivery, product portfolio management, and capability and technology management.

- **Strategic Planning** – Bring strategy to life from formulation to execution across the organization with integrated roadmaps, financials, and business capability management
- **Portfolio and Resource Management** – Optimize project portfolios, balance capacity against demand, and effectively leverage resources to execute your plan
- **Lean and Agile Delivery** – Empower teams and scale delivery by visualizing value streams, optimizing the flow of work, and promoting continuous improvement
- **Product Portfolio Management** – Align your product portfolios to your innovation strategy, and focus your resources on winning products
- **Capability and Technology Management** – Advance capabilities by connecting technology with business outcomes. Engage stakeholders to jointly create enterprise architecture plans and roadmaps that achieve strategic objectives

Whether used separately to achieve specific objectives or together to speed the delivery of transformative change, the work and resource management solutions enabled by Planview Enterprise One will help you advance your strategy.

Planview Enterprise One delivers the strategy and execution software you need to:

- ✓ Increase revenue by reducing time-to-market
- ✓ Optimize resource utilization to create capacity for innovation and transformation
- ✓ Grow portfolio value by prioritizing winning initiatives and killing non-strategic projects and technologies
- ✓ Decrease costs with improved efficiencies from repeatable processes and streamlined reporting
- ✓ Mitigate risk with improved visibility into technology and work portfolios

Accelerate Time to Value and Results

Customer success: This is what drives us every single day. We define your success in results that have meaningful business value for you, and we look for ways to accelerate those results.

Success is achieved by more than just software, and we live that commitment in many ways, including:

- **Planview FastTrack:** These outcome-focused implementation packages offer a low-risk, fixed-price approach to fast, successful rollouts
- **Planview Customer Success Center:** One place for all Planview training, enablement programs, best practices, and more – everything you need to get the most from Planview Enterprise One while speeding time to value
- **Inner Circle Program:** Collaborate and influence the product direction by working directly with our product managers to discuss direction, prioritize enhancement requests, and provide feedback on proposed designs
- **The Planview Customer Community:** Connect with other users and share best practices to advance work and resource management in your organization

Overcome the Complexities of Strategic Execution

Planview Enterprise One facilitates enterprise-wide strategic execution to optimize your technology landscape, deliver innovative products and services, and ultimately drive growth. By orchestrating all work, people, capabilities, and technologies, combined with end-to-end visibility into execution and financials, your organization can quickly iterate and adapt, achieving higher levels of business performance.
